#### **DETAILED ACTION**

#### Specification

1. The abstract of the disclosure is objected to because the abstract exceeds the 150 word maximum. Correction is required. See MPEP § 608.01(b).

2. The disclosure is objected to because of the following informalities: the headings for each section is missing.

Appropriate correction is required.

#### Claim Objections

- 3. Claims 1-3 are objected to because of the following informalities: All independent claims should begin with "A" and all dependent claims should begin with "The". Appropriate correction is required.
- 4. Claim 1 is objected to because of the following informalities: "(3)" in line 16 should be changed to --(7)--. Appropriate correction is required.

### Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless - .

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 3673

5. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Hesling et al. (US Patent No. 3,430,968).

Regarding claim 1, the Hesling et al. reference discloses a multi-part oil control ring (Fig. 1) for pistons (12) of internal combustion engines, having two lamellae (26 and 28) consisting of steel strips (Col. 4, Lines 36-42) and having parallel walls (Fig. 1), the working surfaces (e.g. 62 and 66) of which have a barrel-shaped asymmetrical shape (Fig. 1), in each instance, having a vertex line (e.g. line of each element 26 and 28 in contact with element 34) that extends over the circumference of the lamellae(Fig. 1), as well as a spreading spring (30) disposed between the lamellae, which presses the lamellae both axially against one of the walls (e.g. 18 and 20) of a ring groove (e.g. 22) in the piston, in each instance, and radially against the cylinder wall (14),

wherein

the working surfaces of the two lamellae are configured in such a manner that they correspond to a final contour approaching a condition of wear in the run-in state of the engine, whereby the vertex lines of the working surfaces are oriented in the opposite direction to the center of the ring groove, in each instance, in the assembled state of the oil ring in the piston (Fig. 1).

## Allowable Subject Matter

6. Claims 2 and 3 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Application/Control Number: 10/570,103 Page 4

Art Unit: 3673

7. The following is a statement of reasons for the indication of allowable subject matter: the prior art of record, taken as a whole, does not show nor suggest the combination of limitations required by the claims. Hesling et al. (US Patent No. 3,430,968) is considered the closest prior art. Hesling et al. discloses the invention substantially as claimed in claim 1, including the working surface having a barrel-shaped asymmetrical shape (Fig. 1). However, the Hesling et al. reference fails to explicitly disclose the cross section of the three segments meeting the equations required by the claims. Claim 2 requires at least two parabolic shapes. As seen in the figures of Hesling et al., the surfaces are all straight/flat lines. There does not appear to be any motivation, absent Applicant's own disclosure, to modify the prior art in the manner required by the claims.

#### Conclusion

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gilbert Y. Lee whose telephone number is 571-272-5894. The examiner can normally be reached on 8:00 - 4:30, M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Patricia L. Engle can be reached on (571)272-6660. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
